

# Ken Johnson | Software Engineer

kenjohnson0704@gmail.com • 778-251-9275 • ken-j.ca • github.com/Kojon74 • linkedin.com/in/ken-john/

## TECHNICAL SKILLS

|                       |                                                                               |
|-----------------------|-------------------------------------------------------------------------------|
| <b>Programming</b>    | TypeScript, React.js, Next.js, Node.js, Express, Python, Java, C/C++          |
| <b>Software Tools</b> | AWS, Azure, Google Cloud, Firebase, Git, Visual Studio Code, Unix, CLI, Figma |

## EDUCATION

|                                                                               |                    |
|-------------------------------------------------------------------------------|--------------------|
| <b>University of British Columbia</b>   Vancouver, Canada                     | Graduated May 2023 |
| Bachelor of Applied Science, <b>Computer Engineering</b> , Dean's Honour List |                    |

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Hootsuite   <b>Software Engineer</b>   Vancouver, Canada                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Sept 2024 - Present |
| <ul style="list-style-type: none"><li>Built and maintained key user flows (signup, billing, homepage dashboard) using <b>React, Next.js, and Contentful</b></li><li>Implemented a “Getting started guide” which improved trial to paid conversion by 13%</li><li>Championed the improvement of SEO by exposing hidden content to AI crawlers, adding an llms.txt, and fixing Open Graph tags, which boosted traffic by 15% to targeted pages</li><li>Drove engineering best practices through code reviews, QA process updates, and dev roundtables in an agile team</li><li>Led login page redesign showcasing key features, boosting performance and discovery 5% on our highest-traffic page</li></ul> |                     |
| KnockNow   <b>Software Engineer</b>   Vancouver, Canada                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | May 2022 - Aug 2022 |
| <ul style="list-style-type: none"><li>Leveraged Latent Dirichlet Allocation and Non-Negative Matrix Factorization algorithms to tag and categorize 5,000+ real estate listing descriptions, improving user experience and boosting search accuracy by 20%</li><li>Preprocessed real estate listing descriptions to clean and standardize data, ensuring consistency across the database</li><li>Architected and deployed an <b>SQL</b> database on <b>AWS RDS</b>, providing seamless access to data for cross-functional teams</li></ul>                                                                                                                                                                 |                     |
| TTT Studios   <b>Software Engineer</b>   Vancouver, Canada                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Jan 2021 - Aug 2021 |
| <ul style="list-style-type: none"><li>Implemented front-end components in <b>React Native</b> for a client betting app including real-time updates for odds, scores</li><li>Developed a PM analytics tool that improved project cost and duration estimates by over 70% using <b>Python</b> and <b>Dash</b></li><li>Helped create an agile design process for client projects to improve project lifecycle efficiency and track business KPIs</li></ul>                                                                                                                                                                                                                                                   |                     |
| Bosch   <b>AI Research Scientist</b>   Tokyo, Japan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | May 2020 - Dec 2020 |
| <ul style="list-style-type: none"><li>Researched cutting-edge AI algorithms for potential patent opportunities, contributing to Bosch’s IP portfolio</li><li>Explored <b>reinforcement learning</b> by training AI agents to play games like Tetris, optimizing algorithmic performance</li><li>Collaborated with senior researchers to conceptualize, implement, and validate cutting-edge AI solutions</li></ul>                                                                                                                                                                                                                                                                                        |                     |

## PASSION PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |
